About this Document

This document contains the information needed for the intended use of the N-331. Basic knowledge of servo systems, drive technologies and suitable safety measures is assumed.

Symbols and Typographic Conventions

**CAUTION**

Dangerous situation
If not avoided, the dangerous situation will result in minor injury.
- Actions to take to avoid the situation.

**NOTICE**

Dangerous situation
If not avoided, the dangerous situation will result in damage to the equipment.
- Actions to take to avoid the situation.

**INFORMATION**

Information for easier handling, tricks, tips, etc.

Figures

For better understandability, the colors, proportions and degree of detail in illustrations can deviate from the actual circumstances. Photographic illustrations may also differ and must not be seen as guaranteed properties.

Downloading Manuals

**INFORMATION**

If a manual is missing or problems occur with downloading:

- Contact our customer service department (p. 18).

**INFORMATION**

For products that are supplied with software (CD in the scope of delivery), access to the manuals is protected by a password. Protected manuals are only displayed on the website after entering the password.

The password is included on the CD of the product.

**For products with CD: Identify the password**

1. Insert the product CD into the PC drive.
2. Switch to the Manuals directory on the CD.
3. In the Manuals directory, open the Release News (file including `releasenews` in the file name).
4. Find the user name and the password in the section "User login for software download" in the Release News.

**Downloading manuals**

1. Open the website **www.pi.ws**.
2. If access to the manuals is protected by a password:
   a) Click **Login**.
   b) Log in with the user name and password.
3. Click **Search**.
4. Enter the product code up to the period (e.g., P-882) or the product family (e.g., PICMA® Bender) into the search field.
5. Click **Start search** or press the **Enter** key.
6. Open the corresponding product detail page in the list of search results:
   a) If necessary: Scroll down the list.
   b) If necessary: Click **Load more results** at the end of the list.
   c) Click the corresponding product in the list.
7. Scroll down to the **Downloads** section on the product detail page.
   The manuals are displayed under **Documentation**.
8. Click the desired manual and save it to the hard disk of your PC or to a data storage medium.
Safety

Intended Use

The N-331 PICMAWalk drive is a laboratory device as defined by DIN EN 61010-1. It is intended for indoor use and use in an environment which is free of dirt, oil, and lubricants.

Based on its design and realization the N-331 is intended for positioning, adjusting and shifting loads on one axis at various velocities and with defined forces.

The N-331 is a drive for applications in automation or handling technology. The N-331 is not intended for applications in areas in which a failure would present severe risks to human beings or the environment.

Some models of the N-331 are equipped with optical, incremental sensors.

The intended use of the N-331 is only possible when installed and in conjunction with a suitable controller (p. 10). The controller is not included in the scope of delivery of the N-331.

The electronics must provide the required operating voltages. To ensure proper performance of the servo-control system, the electronics must also be able to read out and process the signals from the sensors.

Safety Precautions

CAUTION

Dangerous voltage and residual charge on piezo actuators!

The N-331 contains piezo actuators. Temperature changes and compressive stresses can induce charges in piezo actuators. After being disconnected from the electronics, piezo actuators can also stay charged for several hours. Touching or short-circuiting the contacts in the connector of the N-331 can lead to minor injuries. In addition, the piezo actuators can be destroyed by an abrupt contraction.

➢ Do not open the N-331.
➢ Discharge the piezo actuators of the drive before installation:
   Connect the drive to the switched-off PI controller, which is equipped with an internal discharge resistor.
➢ Do not pull out the connector from the electronics during operation.

Touching the contacts in the connector can lead to an electric shock (max. 130 V DC) and minor injuries.

➢ Do not touch the contacts in the connector.
➢ Secure the connector of the drive with screws against being pulled out of the controller.

PC software is included in the scope of delivery of the controllers from PI. The operation of the controllers is described in the corresponding user manuals.

Installation

General Notes on Installation

**NOTICE**

**Destruction of the piezo actuator by electric flashovers!**

The use of the N-331 in environments that increase the electrical conductivity can lead to the destruction of the piezo actuator by electric flashovers. Electric flashovers can be caused by moisture, high humidity, liquids and conductive materials such as metal dust. In addition, electric flashovers can also occur in certain air pressure ranges due to the increased conductivity of the air.

- Avoid operating the N-331 in environments that can increase the electric conductivity.
- Only operate the N-331 within the permissible ambient conditions and classifications (p. 20).
**NOTICE**

**Damage due to mechanical actions!**

The encoder scale is scratch-sensitive and can be damaged by mechanical actions, e.g. from pointed objects.

- Handle the encoder scale with great care.
- Do not touch the encoder scale and the ceramic rail.
- Protect the encoder scale and the ceramic rail from dirt and lubricants.

---

**Figure 6:** Ruler (1) of the linear encoder and ceramic rail (2) of the N-331. The ruler is accessible when the runner is extended.

---

**NOTICE**

**Malfunction due to soiling!**

Any type of soiling, e.g. dust, oil, grease or condensation, will render the N-331 inoperable.

- Keep the N-331 free from lubricants, dirt and condensation.
- Avoid touching the ceramic rail of the drive and the ruler of the linear encoder.

---

**NOTICE**

**Heating up of the N-331 during operation!**

The heat produced during operation of the N-331 can affect your application.

- Install the N-331 so that the application is not affected by the dissipated heat.
- Ensure sufficient ventilation at the place of installation.
- Make sure that the complete bottom side of the N-331 is in contact with the surface on which the N-331 is mounted.
NOTICE

Damage due to collisions!
Collisions can damage the drive, the load to be moved, and the surroundings.

- Make sure that no collisions are possible between the drive, the load to be moved, and the surroundings in the motion range of the drive.
- Do not place any objects in areas where they can be caught by moving parts.

INFORMATION

For the positive direction of motion of the runner, see "Product View" (p. 7).

Connecting the N-331 to a Protective Earth Conductor

INFORMATION

Observe the applicable standards for mounting the protective earth conductor.

The N-331 features a separate protective earth connection, see “Dimensions” on p. 21.

![Example of a protective earth connection](image_url)

Figure 7: Example of a protective earth connection

Tools and accessories

- Suitable protective earth conductor: Cross-sectional area of the cable ≥0.75 mm²
- Suitable screwdriver
- M4 screw for connecting the protective earth conductor
Connecting the protective earth conductor to the separate protective earth connection

Figure 8: Recommended mounting of the protective earth conductor (profile view)

1. Base body of the N-331
2. Flat washer
3. Safety washer
4. Screw
5. Cable lug
6. Protective earth conductor

1. If necessary, attach a suitable cable lug to the protective earth conductor.
2. Use the M4 screw (together with the washers and self-locking washers) to affix the cable lug of the protective earth conductor to the protective earth connection of the N-331 as shown in the profile view.
3. Tighten the M4 screw with a torque of 1.2 Nm to 1.5 Nm.
4. Make sure that the contact resistance at all connection points relevant for connecting the protective earth conductor is <0.1 Ω at 25 A.

Mounting the N-331

**NOTICE**

Warping of the N-331 due to mounting on uneven surfaces!

Mounting the N-331 onto an uneven surface can warp the N-331. Warping reduces the accuracy.

- Mount the N-331 onto an even surface. The recommended evenness of the surface is ≤20 µm.
- For applications with large temperature changes:
  - Only mount the N-331 onto surfaces that have the same or similar thermal expansion properties as the N-331.
Requirements

- You have read and understood the safety precautions (p. 5) and the general notes on installation (p. 10).
- The N-331 is not connected to the controller.
- You have provided a suitable surface:
  - Three M4 holes are present.
  - The evenness of the surface is ≤20 µm.
  - For applications with large temperature changes: The surface should have the same thermal expansion properties as the N-331.
- You have accounted for the space required to route cables without bending and according to regulations.

Tools and accessories

- 3 M4 screws of suitable length (p. 21)

Mounting the N-331 on a surface

1. Align the N-331 on the surface so that the M4 holes in the base body and the surface overlap.
2. Insert the three screws through the holes in the surface into the base body of the N-331 from below.
3. Tighten the three screws.
   - Maximum screw-in depth: 7 mm
   - Maximum torque: 2.6 Nm
4. Check that the N-331 fits without backlash.
Start-Up and Operation

General Notes on Start-Up and Operation

**CAUTION**

Risk of electric shock if the protective earth conductor is not connected!

If a protective earth conductor is not connected, dangerous touch voltages can occur and there is a risk of electric shock. In the case of malfunction or failure of the system, touching the N-331 can result in minor injuries.

- Connect the N-331 to a protective earth conductor (p. 12) before start-up.
- Do not remove the protective earth conductor during operation.
- If the protective earth conductor has to be temporarily removed (e.g., for modifications), reconnect the N-331 to the protective earth conductor before starting it up again.

**NOTICE**

Destruction of the piezo actuator by continuously high voltage!

The constant application of high voltage to piezo actuators can lead to leakage currents and flashovers that destroy the ceramic.

If the N-331 is not used, but the controller is to remain switched on to ensure temperature stability:

In closed-loop operation:
1. Switch the servo mode off on the controller (open-loop operation).
2. Set the piezo voltage to 0 V on the controller.

In open-loop operation:
- Set the piezo voltage to 0 V on the controller.

**NOTICE**

Operating voltage too high or incorrectly connected!

Operating voltages that are too high or incorrectly connected can cause damage to the N-331.

- Only operate the N-331 with a controller from PI.
- Do not exceed the operating voltage range (p. 20) for which the N-331 is specified.
- Only operate the N-331 when the operating voltage is properly connected; see "Pin Assignment" (p. 22).
NOTICE

Uncontrolled oscillation!
Oscillations can cause irreparable damage to the drive. Oscillations are indicated by a humming and can result from the following causes:

- A change in the load and/or dynamics requires the servo-control parameters to be adjusted.
- The drive is operated near its resonant frequency.

If you notice oscillations:

- In closed-loop operation, immediately switch off the servo mode.
- In open-loop operation, immediately stop the drive.

NOTICE

Damage due to travel to the hard stop!
Repeated travel to the hard stop can cause damage and considerable wear to the mechanics.

- Stop the motion immediately if a controller malfunction occurs.
- Set the control signal so that the moving part does not try to continue moving at the end of the travel range.

Start-Up and Operation

Requirements

✓ You have read and understood the safety precautions (p. 5) and the general notes on start-up and operation (p. 15).
✓ You have read and understood the user manual of the controller.
✓ You have properly installed the N-331 (p. 10).
✓ The controller and the required PC software have been installed. All connections with the controller have been established (see user manual of the controller).

Start-up and operation

- For start-up and operation of the N-331, follow the instructions in the manual of the controller used.

Discharging the N-331

The N-331 must be discharged in the following cases:

- Before installation
- If the N-331 is not used but the controller remains switched on to ensure temperature stability
- Before demounting (e.g., before cleaning and transporting the N-331 and for modifications)

The N-331 is discharged through the internal discharge resistor of the controller from PI.
Discharging an N-331 that is connected to the controller

In closed-loop operation:
1. Switch off the servo mode on the controller.
2. Set the piezo voltage to 0 V on the controller.

In open-loop operation:
- Set the piezo voltage to 0 V on the controller.

Discharging an N-331 that is not connected to the controller
- Connect the drive to the switched-off controller from PI.

Maintenance

General Notes on Maintenance

**NOTICE**

Misalignment from loosening screws!
The N-331 is maintenance-free and achieves its positioning accuracy as a result of the optimum alignment of mechanical components and piezo actuators. Loosened screws cause a loss in positioning accuracy.
- Only loosen screws according to the instructions in this document.
- Do **not** open the N-331.

Cleaning the N-331

**Requirements**
- You have discharged the piezo actuators of the N-331 (p. 27).
- You have disconnected the N-331 from the controller.

**Cleaning the N-331**
- Clean the surfaces of the N-331 with a cloth that is slightly dampened with a mild cleanser or disinfectant (e.g. ethanol or isopropanol).
- Do **not** do any ultrasonic cleaning.
Customer Service

For inquiries and orders, contact your PI sales engineer or send us an email (info@pi.ws).

- If you have questions concerning your system, have the following information ready:
  - Product codes and serial numbers of all products in the system
  - Firmware version of the controller (if present)
  - Version of the driver or the software (if present)
  - Operating system on the PC (if present)

- If possible: Take photographs or make videos of your system that can be sent to our customer service department if requested.

The latest versions of the user manuals are available for download (p. 4) on our website.

1 To ensure stable operation, the maximum operating frequency is defined as approximately 1/3 of the mechanical resonant frequency.

2 The heat generated by the piezo actuator during dynamic operation limits the value for maximum power consumption. Details can be found online:

Old Equipment Disposal

In accordance with EU law, electrical and electronic equipment may not be disposed of in EU member states via the municipal residual waste.

Dispose of your old equipment according to international, national, and local rules and regulations.

In order to fulfil its responsibility as the product manufacturer, Physik Instrumente (PI) GmbH & Co. KG undertakes environmentally correct disposal of all old PI equipment made available on the market after 13 August 2005 without charge.

Any old PI equipment can be sent free of charge to the following address:

Physik Instrumente (PI) GmbH & Co. KG
Auf der Roemerstr. 1
D-76228 Karlsruhe, Germany
